

The AI Visibility Checklist

How to get ChatGPT and every AI engine recommending your business by name.
The exact steps I used on my own company.

by **Brycen Wood** · @brycenwood.ai

20 → 61 in one week

Your customers stopped Googling. They ask AI now. If AI doesn't know you exist, you're invisible at the exact moment people are deciding who to buy from. I took my own business from a **20 to a 61** on AI visibility in a week, and now ChatGPT recommends it **by name**. Here's the whole checklist, nothing held back.

1 Make your business readable to AI

An llms.txt file is a plain-text cheat sheet that tells AI exactly what you do, where, and who for. This is the single fastest win, ~20 minutes.

- ☐ Create an `llms.txt` file at `yourdomain.com/llms.txt`
- ☐ Include **who you are, what you do, where you serve, key services, and contact**
- ☐ Add an `llms-full.txt` with deeper detail for engines that want more
- ☐ Link the exact pages you want AI to prioritize when it quotes you
- ☐ Keep it **factual and plain**. No marketing fluff, AI ignores hype

2 Write content that answers what people ask AI

AI quotes the source that answers the question most directly. Keywords are out. Real questions are in.

- ☐ List the **20 real questions** customers ask before buying (questions, not keywords)
- ☐ Write one clear answer page per question: *"Best [service] in [city]," "How much does X cost," "X vs Y"*
- ☐ Put the answer in the **first two sentences** of the page. AI lifts the direct answer
- ☐ Write like a human talking, not keyword-stuffed SEO copy
- ☐ Add **FAQ schema** so engines can parse the Q&A cleanly

3 Get cited where AI already trusts

AI recommends businesses it sees mentioned across sources it already trusts. Citations are the proof.

- ☐ Claim and fully complete your **Google Business Profile**
- ☐ Get listed in your industry's authority directories
- ☐ Earn reviews with **volume, recency, and your business name** in the text
- ☐ Get mentioned on local and industry sites AI scrapes (press, partners, guest posts)
- ☐ Keep your **name, address, phone** identical everywhere online

4 Measure it (and keep measuring)

You can't improve what you don't check. This compounds month over month.

- ☐ Ask ChatGPT, Perplexity, and Gemini for the **best [your service] in [your city]**
- ☐ Note the result: **are you named, is a competitor named, or no one?** All three tell you something
- ☐ Re-check **monthly**. Watch your name start showing up as the work compounds

THE HONEST PART

Don't want to do all this by hand?

Every box above works. I did them. But doing all of it by hand, writing the answer content, maintaining the llms.txt, chasing citations, tracking five different AI engines, is basically a part-time job. So I automate it with a tool called **cytd**. It auto-publishes the answer content, maintains your llms.txt, and tracks where you show up across the AI engines. It's the tool that took my own score from a **20 to a 61 in a week**.

Full disclosure: that's my affiliate link below, I earn a commission if you sign up. I only recommend it because I actually run it on my own business, and you just read the exact checklist of what it does so you can decide for yourself.

MY GIFT FOR USING MY LINK

Sign up to cytd through my link and I'll give you free **LIFETIME** access to my private community, **Business On Autopilot** (it used to be \$97/mo). That's where I break down the AI visibility playbook, share what's working, and answer questions directly.

How to claim: sign up with the link below, then reply to my DM (or message me **@brycenwood.ai**) with your confirmation and I'll add you, free, for life.

Start with the free AI visibility check. It scores exactly where you stand right now across the engines. No card, no commitment, just your number.
